Ultra Light is tested to meet ISTA 3E 2009 specifications by TÜV Rheinland

Quality verified by international tests

PlastPack Nordic tests all its products at the most renowned institutes for material testing in Europe, ISTA. We do so in order to ensure quality performance is maintained throughout the lifetime of the pallet. By testing the pallet **Load Capacity** we ensure that our customers goods are well protected and that the stated maximum load is well within performance values. We **Drop Test** our pallets to ensure that rough handling of our pallets doesn't affect their durability and longevity. Through **Vibration tests** we ensure that PPN pallets protect customer products during air, road and sea transportation, and they can resist shifting loads. The **Compression Test** confirms the extreme loads the pallet is able to handle and ensures that the pallet perform.

Benefits

Using ISTA approved pallets, ensures that your product will be safe during transportation and handling. Most product failures can be traced back to handling and shipping of products, where they experience hard handling. The **Ultra Light** series of pallets from PlastPack Nordic, are designed and engineered with this in mind and are proven to provide our customers with market leading performance wherever and whenever they are used.
